## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 43-47, 49-55, 83-85, 98 and 100, drawn to A method of rate adaptation in a communication apparatus, comprising: **providing information bits of a prescribed data rate to an input of an encoder; the encoder having a prescribed code rate**; adapting the prescribed code rate of the encoder and providing coded bits, based on an adapted code rate, to an output of the encoder, the prescribed code rate being adapted to the adapted code rate for providing a coding gain; and performing repetition or puncturing of the coded bits by a rate matching device, the output of the encoder being coupled to an input of the rate matching device; and interleaving the result of the repetition or puncturing which is provided from an output of the rate matching device to an input of an interleaver, classified in class 714, subclass 822.
- II. Claims 56, 58-60, 86-97, 99 and 101-103, drawn to A communication device having a rate adaptation mode, comprising: an encoder for receiving information bits at a prescribed data rate and having a prescribed code rate, wherein **when the prescribed data rate changes, the prescribed code rate of the encoder is adapted to an adapted code rate for providing coding gain, and the encoder providing**

**coded bits based on the adapted code rate**: a rate matching device for receiving the coded bits based on the adapted code rate from the encoder, and repeating or puncturing a prescribed number of coded bits; and an interleaver for receiving an output of the rate matching device, classified in class 714, subclass 774.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process (Group I) and apparatus (Group II) for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process (Group I) can be used in a communication device whereby input data is rate matched to individual channel components and the apparatus (Group II) can be used for adaptive encoding.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Daniel Kim on 7/7/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph D. Torres whose telephone number is (571) 272-3829. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert Decady can be reached on (571) 272-3819. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
